

CREATING GRID CORNERS

Point and Create Method

- 1 Set RANGE to 30 NM using the RANGE Knob. 30 NM range will create a **7.5 minute Lat/Long grid**.
- 2 Turn outer FMS knob to **WPT** Group then inner knob to select **USER WAYPOINT** page. (Page 5).
- 3 Press **JOYSTICK** to turn on the pointer.
- 4 Move pointer to NorthWest corner of selected grid.
- 5 NOTE: Write down the **lat/long** of the grid on Form 1AC.
- 6 PRESS **NEW SOFT KEY**. Waypoint menu opens. (Note: The cursor will turn to a white crosshair at the point of the arrow).
- 7 Name waypoint by using the outer and inner FMS knobs, then press enter to save.
- 8 Press the **JOYSTICK** to turn on the pointer.
- 9 Cursor to the next desired corner and press the **NEW** soft key.
- 10 Repeat the sequence to record the remaining corners.
- 11 You will see an orange square for each corner you created.
- 12 The waypoints created can be used for creating a “direct to” flight plan by pressing “direct to” key on the PFD or MFD.
