

Basic Operations

Direct To a waypoint

1. PRESS **D** (this opens the Direct to window)
2. ROTATE small FMS Knob one click clockwise to highlight only the first character to begin the spelling process. The character “**K**” appears by default.
3. ROTATE Large FMS Knob one click clockwise to move the cursor.
4. ROTATE Small FMS Knob until desired character appears.
5. Continue until Identifier is complete.
6. PRESS **ENT** to highlight “ACTIVATE”?
7. PRESS **ENT** again. This closes the DIRECT TO window and draws a magenta line in the MFD (and also in the inset on the PFD if it is showing) from your current position to the selected waypoint.

NOTES

NOTE: While the Direct to window is displayed, the MAP box shows a map of the waypoint and its scale can be changed by moving the RANGE joystick.

NOTE: The MFD Data Bar and the PFD Navigation Status Bar at the top of the respective displays will reflect the entered information.

NOTE: If a flight plan was active prior to the Direct To operation, those waypoints are still displayed. PRESS small FMS Knob to activate the cursor on the last waypoint line. ROTATE Large FMS Knob to highlight desired waypoint. PRESS **D** and **ENT** twice. PUSH small FMS Knob to deactivate the cursor or PRESS **FPL** to return to the MAP 1 page.
